

32CH DMX512 Constant Voltage Decoder User Manual

(Please read through this manual carefully before use)
Update Time: 2019.4.10

1. Brief Introduction

Welcome to use the DMX512 Constant Voltage Decoder, designed for Hi-power multiple channels application, which is developed only for constant voltage LED lamps. It adopts advanced micro-computer control technology to transfer DMX512/1990 signal to PWM signal. 32 channels output, Max. 3A each channel, up to 2304W output power, 65536 gray scales, workable for single color, color temperature, RGB and RGBW led lamp.

2. Specifications

Model	32CH DMX512 Decoder
Input voltage	DC5V-24V
Max load current	3A×32CH , Max 96A
Max output power	480W(5V)/1152W(12V)/2304W(24V)
Output scale level	256 levels(8bit)/65536 levels(16bit)
Input signal	DMX512/RDM
Output DMX channel	Constant Voltage PWM×32CH
Output frequency	1K, 2K, 4K, 8K selectable
Decode channel	32CH
DMX512 socket	XLR-3R/ RJ45/ Terminal block
Control mode	DIM /CT /RGB /RGBW 4 modes switch
Dimension	L195 X W145 X H38(mm)
Weight (G.W)	810g

1

3. Basic Features

- Easy operation with OLED screen and touch buttons.
- 8bit (256 levels)/16bit (65536 levels) grey level optional.
- Support 3 kinds of DMX ports with signal isolation function: 3-pin XLR, RJ45 and green terminal (with signal amplifier function).
- With RDM remote management protocol, the operations can be completed via the RDM master console, such as parameters browsing & setting, DMX address setting, equipment recognition, etc.
- Optional for standard, linear, LOG or custom 0.1-9.9 dimming curve.
- Power-off data saved function.

4. Safety warnings

- Please don't install this controller in lightning, intense magnetic and high-voltage fields.
- To reduce the risk of component damage and fire caused by short circuit, make sure correct connection.
 - Always be sure to mount this unit in an area that will allow proper ventilation to ensure a fitting temperature.
 - Check if the voltage and power adapter suit the controller (please select DC12-24V power supply with constant voltage)
 - Don't connect cables with power on; make sure a correct connection and no short circuit checked with instrument before power on.
 - Please don't open controller cover and operate if problems occur.
- The manual is only suitable for this model; any update is subject to change without prior notice.
- When the signal line is long or the wire quality causes the signal recoil effect to affect the use of product, you can try to connect 0.25W 90-120Ω terminating resistor at the end of each signal line to solve.

5. Interfaces

Main component description:

2

6. Conjunction Diagram

Note: RDM controller can only be used normally with 3-pin XLR terminals.

3

7. Operating instructions

OLED screen interface:

Press "M" key, switch entries. Press "+" or "-" key, parameter adjustment. Exit: back to previous page. Long press three buttons in case of power off. Restart to restore the factory settings.

2. DMX address setting

DMX Addr: 001 Main page
DMX Bit: 8 Press "+" or "-" key to set
Output Freq: 1.0K DMX address.
Output Mode: RGBW Range: 001-512

4. Mode

DMX Addr: 001 Press "+" or "-" key to choose.
DMX Bit: 8 Optional:
Output Freq: 1.0K DIM, CT, RGB, RGBW
Output Mode: RGBW

6. Dimming curve

Output Curve: 1.0 Press "+" or "-" key to choose.
Enter Test Mode Optional: 0.1-9.9 (only 8bit can be set)
It is recommended to use 1.8
0.1-9.9 is for special requirements.

1. Lock screen interface:

A: 001 B: 8 F: 1.0 No operation after 10 seconds into the lock screen interface, display only has set up a good parameter, long press the M key for 2 seconds to unlock. The star symbol flashes when there is DMX signal in.

3. PWM frequency

DMX Addr: 001 Press "+" or "-" key to choose.
DMX Bit: 8 Optional:
Output Freq: 1.0K 8K, 4K, 2K, 1K
Output Mode: RGBW It is recommended to use 1K

5. Grey scale

DMX Addr: 001 Press "+" or "-" key to choose.
DMX Bit: 8 Optional: 8bit
Output Freq: 1.0K 16bit (choose it if the master controller support this function)
Output Mode: RGBW

7. Built-in test

Mode: M0 8 bit Press "+" or "-" key to choose.
Optional: Mode M0-10
R: 000 G: 000 Digits 8bit or 16bit
B: 000 W: 000 Grey scale 0-255 or 0-65536
Curve: 1.8 Exit Gamma value 0.1-9.9 (only 8bit can be set)

- Instruction:
 - 8 outputs controlled synchronously when in test mode.
 - Test mode as below:

NO	Modes	Description
M0	RGBW can be dimmed separately in static mode	Brightness adjustable
M1	3 color skipping	Brightness, speed adjustable
M2	7 color skipping	Brightness, speed adjustable
M3	White color strobe	Brightness, speed adjustable
M4	3 color smooth	Brightness, speed adjustable
M5	Full color smooth	Brightness, speed adjustable
M6	RG color smooth	Brightness, speed adjustable
M7	R B color smooth	Brightness, speed adjustable
M8	GB color smooth	Brightness, speed adjustable
M9	White color fade & change	Brightness, speed adjustable
M10	Great cycle	All mode cycle

8. After-Sales

From the day you purchase our products within 3 years, if being used properly in accordance with the instruction, and quality problems occur, we provide free repair or replacement services except the following cases:

- Any defects caused by wrong operations.
- Any damages caused by inappropriate power supply or abnormal voltage.
- Any damages caused by unauthorized removal, maintenance, modifying circuit, incorrect connections and replacing chips.
- Any damages due to transportation, breaking, flooded water after the purchase.
- Any damages caused by earthquake, fire, flood, lightning strike etc force majeure of natural disasters.
- Any damages caused by negligence, inappropriate storing at high temperature and humidity environment or near harmful chemicals.
- Product has been updated.

9. Kindly Reminder

Power Source Selection: Power source must be DC constant voltage type of power supply. Due to the efficient output in some power supplies are only 80% of total, so please select at least 20% higher output power supply than the consumption of LED lights.
